

Software & Product Engineer — Go, Distributed Systems, AI/Agentic Systems

A decade of experience building distributed systems and shipping products end-to-end, from architecture to customers. Deep technical expertise in Go, Kubernetes, and cloud-native infrastructure, paired with product ownership across fractional CTO and founder roles: setting technical strategy, scoping roadmaps, and working directly with customers to turn business problems into shipped software.

Distributed Systems & High Availability Microservices, Kafka, Redis, Cassandra, multi-region cloud	AI & Automation LLM integration, agentic workflows, RAG pipelines	Product & Leadership Technical strategy, roadmap ownership, customer-facing delivery

EXPERIENCE

UtuHealth — Fractional CTO

Vancouver, Canada (Remote) · July 2026 – Present

- Serve as hands-on fractional CTO, driving technical strategy and personally building on Kleia, UtuHealth's agentic orchestration platform that automates call handling, appointment booking, reminders, and follow-ups to reduce administrative burden on medical office assistants and providers.
- Built Taji, an agentic Quality Improvement (QI) platform on Kleia for OSCAR EMR clinics, combining LLM-driven indicator analysis via a RAG pipeline with a privacy-by-design architecture, a de-identified semantic layer, human approval gating, and structural read-only AI access, to ground condition registry logic in retrievable evidence and produce monthly QI charts with source-cited provenance for every flagged case.
- Lowered infrastructure costs by 60% by right-sizing capacity with autoscaling and shifting background workloads to spot instances.

Technologies: Go, LLM Integration, RAG, Postgres, Message Queue, Kubernetes, Azure

Mercor — Golang AI Specialist & Competitive Problem Architect

Vancouver, Canada (Remote) · September 2025 – Present

- Evaluated high-complexity Go code generated by LLMs, with focus on concurrency patterns, memory efficiency, and production-grade reliability under load.
- Designed and validated AI agent workflows for multi-step web browsing tasks, improving robustness and accuracy in real-world, high-variability scenarios.
- Engineered a feedback loop system that improved AI code generation reliability, reducing error rates in automated developer tooling.
- Authored algorithmic challenges (LeetCode/Codeforces-style) with comprehensive test suites and optimal reference solutions to stress-test AI code quality.

TrialAbuse — Founder & Engineer (trialabuse.com)

Vancouver, Canada (Remote) · 2025 – Present

- Built a **real-time fraud detection SaaS platform** for free trial and bonus abuse, combining a 150+ signal detection engine (device fingerprinting, network intelligence, behavioral analysis, cross-operator consortium data) to deliver a single fraud verdict in 67ms median with 94% accuracy.
- Shipped self-serve pricing tiers with Stripe billing on **GCP/Kubernetes**, driving \$8:1 ROI and ~\$100K/month in recovered fraud losses for customers.

Technologies: Go, GCP, Kubernetes, Docker, Redis, PostgreSQL, Stripe, Device Fingerprinting, Behavioral Analytics

PropCopyAI — Founder

Calgary, Canada (Remote) · April 2025 – Present

- Built a **cloud-native Micro-SaaS** on GCP/Kubernetes in **Go + HTMX**, integrating a multimodal LLM (Gemini) for real-time image-to-text property analysis, with S3-backed image storage and Stripe subscription billing.

Technologies: Go, HTMX, Gemini (Multimodal LLM), AWS S3, Docker, Kubernetes, Stripe, GCP

Rogers Sports & Media — Senior Software Engineer

Vancouver, Canada (Remote) · March 2023 – November 2024

- Designed and delivered a **high-availability user data microservice** in Go backed by **Cassandra and Redis**, improving data consistency and system uptime for millions of users.
- Built **scalable sports data aggregation microservices** using **Go, Kafka, and PostgreSQL**, capable of ingesting and processing real-time event streams at high throughput.
- Architected distributed microservices with redundancy and failover patterns, measurably increasing system uptime and performance under peak load.
- Led cross-functional collaborations translating business requirements into technical specifications; mentored junior engineers on distributed systems best practices.

Technologies: Go, Cassandra, Redis, Kafka, PostgreSQL, Docker, Kubernetes, Azure, AWS, REST & GraphQL APIs

Sia Partners — Software Engineer

Paris, France (Remote) · April 2022 – August 2022

- Built a robust REST API for an HR mentoring platform, improving mentor-mentee matching at scale.
- Implemented **Redis caching** to reduce database load and optimize search response times.
- Designed ETL pipelines for seamless, reliable data integration across systems.
- Engineered secure file storage for CVs and profile pictures using **Google Cloud Storage**.

Technologies: Python, FastAPI, Redis, Google Cloud Storage, Pandas, PostgreSQL

Scaleway — Software Engineer

Paris, France (Hybrid) · April 2019 – October 2021

- Scaled device polling infrastructure to handle **30,000+ devices** using **Celery and Redis**, reducing error rates to under 1% — a critical reliability milestone for data center operations.
- Streamlined billing processes using **distributed event-driven architecture**, cutting processing time from 3 days to 1 day — a 66% reduction.
- Developed a **Modbus RTU to TCP converter** and a PUE calculator API in Go, improving data center energy efficiency monitoring.

Technologies: Python, Go, Django (DRF), Celery, Redis, RabbitMQ, Pandas, PostgreSQL

Entr’ouvert — Software Engineer

Paris, France · October 2015 – November 2018

- Developed a **reverse proxy authentication solution** using Nginx for Single Sign-On (SSO) via SAML, handling authentication at scale across multiple services.
- Built a **REST key-value storage microservice** with ACL support and Role-Based Access Control (RBAC), improving data security and multi-tenant isolation.
- Integrated **OIDC/OAuth2** for modern, standards-based authentication flows.

Technologies: Python, Django, Nginx, SAML, OIDC/OAuth2, RabbitMQ, Microservices

LOGAXONE — Software Engineer / DevOps Engineer

Paris, France · August 2014 – September 2015

Euronext / Paris Mutuel Urbain

- Built a Ruby tool for AIX partition management, reducing partition creation time by over an hour.
- Developed **Puppet modules** to standardize and accelerate testing and development environment configuration.
- Established **CI/CD pipelines** with GitLab, Jenkins, and Nexus, improving deployment reliability and automation.
- Designed a testing solution for trading platforms, including the Order Message Executor.

Technologies: Ruby, Puppet, GitLab, Jenkins, Nexus, AIX, CI/CD, Bash/Shell

SKILLS

Languages	Go, Python, JavaScript, Ruby, Solidity
Databases	PostgreSQL, Cassandra, Redis
AI/ML	LangChain-Go, RAG, Agentic Systems, Ollama, n8n, LLM integration
Infrastructure	Kubernetes, Docker, GCP, AWS, Azure, Ansible, CI/CD, Observability
Messaging	Kafka, RabbitMQ, Pub/Sub, libp2p
APIs & Protocols	REST, GraphQL, gRPC, SAML, OIDC/OAuth2, HTMX

EDUCATION

Bachelor's Degree in Information Technology — SUPINFO, Paris, France

2011 – 2014
